From this event we could see that the students have a great level of creativity, knowledge and understanding of the issues regarding wild life protection as well as ways to preserved and protect the environment.

Wild life Week Celebration

2. Inter-college poster Competition on the 4th October 2021

Objectives: The objectives of organizing this event are to know how well the students are aware on the status of the wild life in our country and across the globe. Besides, it will also help the students to showcase their creativity and expression.

Outcome: The response for participation from most colleges was very good and prompt, 12 participants took part in the competition. From the posters submitted by the participants we could conclude that, the students are well aware in terms of how we could do to protect and preserve the environmental, local habitats and niches especially of the vulnerable, threatened and endangered species of wild life. Using energy, water and other natural resources efficiently and with care may also help in combating the level of destruction to the environment, hence ensuring the preservation of wild life. Limiting pollution to levels which might not damage natural systems.

3. Webinar on “Recent Advances and initiatives in Wild Life Sciences on the 6th October 2021” conducted on the 6th October 2021 as part of the Wild Life Celebration Week (2nd -8th October)

Objectives:

The main objectives in organizing the Webinar is:

1. To Know the initiative taken by the government and various conservation groups in conservation of wildlife
2. To know the advance cutting-edge and various conservation tools used in conservation of wildlife in India
3. To help various stake holders aware on the status of forests, livelihoods and different strategies and ways for wildlife protection in India.
4. Our main beneficiaries from the webinar were the students both from the college and other colleges.

Outcome:

79 participants which include from 6 different colleges. Participants were students, teachers and staff. The resource person was Dr Salvador Lyngdoh, Scientist D. Department of Animal Ecology and conservation Biology, Wild Life Institute of India, Dehradun.

The resource person highlighted the various strategies taken by the government of India to strengthen the forest ecosystem for supporting conservation of wildlife nationwide. From the responses and the feedback received from the participants it clearly indicated that such type of talks, discussions or seminars concerning the awareness on the protection of forest is the need of an hour as protecting and preserving the forests means protection and conservation having a direct impact on wildlife. Forest and wildlife go hand in hand. Education of youth and students on the importance of protecting forest and forest resources will help them be more aware on the importance and dependency of sustaining life as wildlife acts as indicators of the overall state of health of the environment. Besides, the co-existence of animals and plants is essential for the cure of many ailments and diseases.
